Specification Document version 0.3

Version	Date	Descriptions	Name
0.1	30 - 01 - 2016	First Draft	Amit
0.2	20 - 03 - 2016	Design Specification 1	Amit
0.3	02 - 04 - 2016	Design Specification 2	Amit
0.4	13 - 05 - 2016	Test Report	Nook (Tester)

GitHub Link = https://github.com/amitnopanan/ProjectSE

DESCRIPTION COMPONENT 1. A detailed description of each software component contained within the architecture is presented.:

Product Management

- 1.2.1. PROCESSING NARRATIVE (PSPEC) FOR COMPONENT 1. It should also describe the responsibilities of the component.
- -Product Management is a component for manage Product's information that show in web page. There're operations to add new product, edit information from existing product and delete existing product.
- 1.2.2. COMPONENT 1 PROCESSING DETAIL. A detailed algorithmic description for each component is presented.
 - 1.2.2.1. Design Class hierarchy for component 2

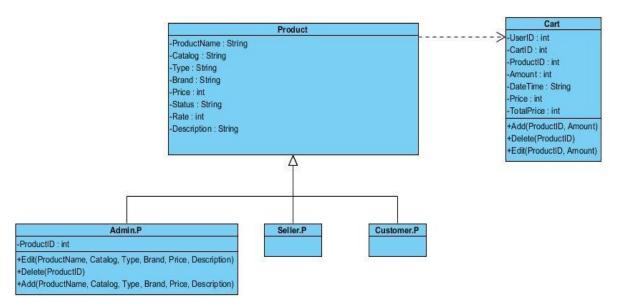

Figure 4.2.2.1

- 1.2.2.2. Restrictions/limitations for component 2
- Product management is limitation for every customer and seller to see product's information. In the other hand administration can add, edit and delete product data.
- 1.2.2.3. Performance issues for component 2
- All data must match the data that input by administration.
- All product data and picture must be shown within 3 seconds.
- All data that be added must finish within 3 seconds.
- All editing data must be finish within 3 seconds.
- Pop-up for success and error must be shown within 3 seconds.
- 1.2.2.4. Design constraints for component 2
- Use PHP, HTML language.
- Catalog are fixed to be skin care, cosmetic or dietary supplement.
- Type are fixed depend on catalog.
- ProductID is automatically generated.
- Status and rate is change depend on number of product that has been sold.
- ProductName, Catalog, Type, Brand and Price are required fields.
- Must have edit operation in every field of data except ProductID and Rate.
- Only Administration can use add, edit and delete operation.

1.2.2.5. Processing detail for each operation of component n

- 1.2.2.5.1. Processing narrative (PSPEC) for each operation
- Add (ProductName, Price, Quantity, ProductType, ProductImage) is operation to add new product to database.
- Edit (ProductName, Price, Quantity, ProductType, ProductImage) is operation to edit existing product data.
- Delete (ProductID) is operation to delete all data of existing product.
- 1.2.2.5.2. Algorithmic model (e.g., PDL) for each operation
- Add (ProductName, Catalog, Type, Brand, Price, Description)

Start

If ProductID is not exist

Create new Product

Return TRUE

Else

Return FALSE

End

- Edit (ProductName, Catalog, Type, Brand, Price, Description)

Start

If ProductID is exist

Check for field to edit

Replace text field

Return TRUE

Else

Return FALSE

End

- Delete (ProductID)

Start

If ProductID is exist

Delete all field of ProductID

Return TRUE

Else

Return FALSE

End.

Test case Table

Test ID	Test Description	Test Data	Step	Precondition	Post condition	Expected Result	Actual Result	Status
1	User can login if he enters the correct E-mail and Password	E-Mail: Amit2506@hotmail.com Password: Amit2506	1.Open webpage 2. Go to login page 3. Enter Amit2506@hotmail.com for E-mail 4. Enter Amit2506 for Password 5. Click 'Login'	User Account must exist in the database	Check user type = Admin	Webpage direct to admin page. The Email is show on the top right menu	Webpage direct to admin page. The Email is show on the top right menu	PASS
2	User can login if he enters the correct E-mail and Password	E-Mail: iigd@hotmail.co.th Password: Prae1812	1.Open webpage 2. Go to login page 3. Enter iigd@hotmail.co.th for E- mail 4. Enter Prae1812 for Password 5. Click 'Login'	User Account must exist in the database	Check user type = Customer	Webpage direct to home page. The Email is show on the top right menu	Webpage direct to home page. The Email is show on the top right menu	PASS
3	User cannot login if he doesn't enter E-mail or Password (Customer)	E-Mail: iigd@hotmail.co.th Password:none	1.Open webpage 2. Go to login page 3. Enter iigd@hotmail.co.th for E- mail 4. Click 'Login'	User Account must exist in the database (Customer)	None	The login form displays the error message and prevents user from logging in. And show message error	The login form displays the error message and prevents user from logging in but does not show message error	FAIL
4	User cannot login if he doesn't enter E-mail or Password (Admin)	E-Mail: Amit2506@hotmail.com Password:none	1.Open webpage 2. Go to login page 3. Enter Amit2504@hotmail.com for E-mail	User Account must exist in the database (Admin)	None	The login form displays the error message and prevents user from logging in. And show	The login form displays the error message and prevents user from logging in but does not	FAIL

			4. Click 'Login'			message error	show message error	
5	Normal adding new product	ProductName: test Price: 12 Quantity: 10 ProductType: testtype Picture URL: http://www.xxxxx.com	1. Login as Admin 2. Click on tab Product in the left menu bar 3. Fill Product's Name 4. Fill Product's Price 5. Fill Product's quantity 6. Fill Product's type 7. Fill Product's url 8. Click 'Add Product'	User account must be admin and exist in the database	Product added is existing in database	Adding product Successful and product show in the product inventory	Add product Successful and product show in the product inventory	PASS
6	Add Product without any data	ProductName: -None- Price:None Quantity:None ProductType:None Picture URL:None	1. Login as Admin 2. Click on tab Product in the left menu bar 3. Click 'Add Product'	User account must be admin and exist in the database	None	Adding Product unsuccessful and stay in adding page	Adding Product unsuccessful and stay in adding page	PASS
7	Adding Product with insufficient data	ProductName: test Price: 12 Quantity: 10 ProductType:None Picture URL:None	1. Login as Admin 2. Click on tab Product in the left menu bar 3. Fill Product's Name 4. Fill Product's Price 5. Fill Product's quantity 8. Click 'Add Product'	User account must be admin and exist in the database	None	Adding Product unsuccessful and stay in adding page	Adding Product unsuccessful and stay in adding page	PASS
8	Add Product that the name already exists in database	ProductName: test Price: 12 Quantity: 10 ProductType: testtype Picture URL: http://www.xxxxx.com	1. Login as Admin 2. Click on tab Product in the left menu bar 3. Fill Product's Name 4. Fill Product's Price 5. Fill Product's quantity 6. Fill Product's type 7. Fill Product's url 8. Click 'Add Product'	1.User account must be admin and exist in the database 2.Product must exist in the database	None	Adding Product unsuccessful and stay in adding page. And show the error message that the 'Product is already in'	Adding Product unsuccessful and stay in adding page. Does not show error message that the 'Product is already in'	FAIL
9	Add Product with wrong type	ProductName: test Price: 12 Quantity: 10	Login as Admin Click on tab Product in the left menu bar	1.User account must be admin and	None	Adding Product unsuccessful and stay in adding page. And	Adding Product unsuccessful and stay in adding	PASS

		ProductType: testtype Picture URL: 12345.jpg	3. Fill Product's Name 4. Fill Product's Price 5. Fill Product's quantity 6. Fill Product's type 7. Fill Product's url with wrong type 8. Click 'Add Product'	exist in the database 2.Product must exist in the database		show the error message that the 'Wrong type with url'	page. And show the error message that the 'Wrong type with url'	
10	Normal Editing Product	ProductName: test 1 Price: 10 Quantity: 15 ProductType: testtype Picture URL: http://www.xxxxx.com	1. Login as Admin 2. Click on tab Product in the left menu bar 3. Click 'Edit' the product that you want to edit 4. Fill Product's Name 5. Fill Product's Price 6. Fill Product's quantity 7. Fill Product's type 8. Click 'Update'	1.User account must be admin and exist in the database 2.Product must exist in the database	Product that edit is existing in database (inventory)	Editing product Successful and product show in the product inventory	Editing product Successful and product direct show in the product inventory	PASS
11	Editing Product without any data	ProductName: -None- Price: -None- Quantity:None ProductType:None Picture URL:None	1. Login as Admin 2. Click on tab Product in the left menu bar 3. Click 'Edit' the product that you want to edit 4. Delete Product's Name 5. Delete Product's Price 6. Delete Product's quantity 7. Delete Product's type 8. Delete Product's Picture url 9. Click 'Update'	1.User account must be admin and exist in the database 2.Product must exist in the database	None	Editing product unsuccessful and product does not show in the product inventory and show the error message 'Please field the form'	Editing product unsuccessful and product does not show in the product inventory and show the error message 'Please field the form'	PASS
12	Delete Product from inventory	None	Login as Admin Click on tab Product in the left menu bar Click 'Delete' product	1.User account must be admin and exist in the	Product that delete is not existing in database	Product delete from inventory	Product delete from inventory	PASS

GitHub Link = https://github.com/amitnopanan/ProjectSE

	that you want to delete	database	(inventory)		
		2.Product			
		must exist in			
		the database			

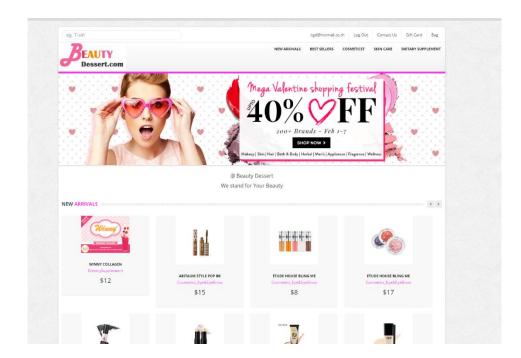

Test Result

Case1: Admin Login with email and password Successful

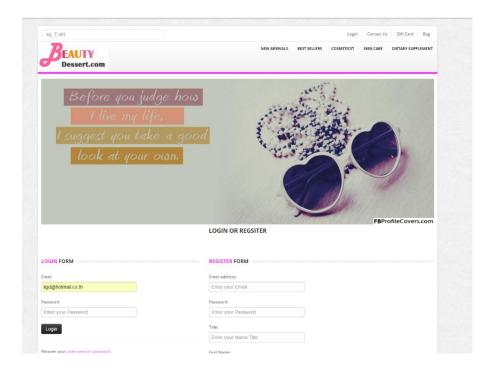

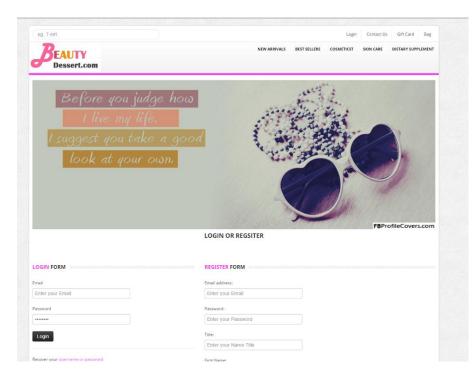

Case2: Customer Login with Email and Password Successful

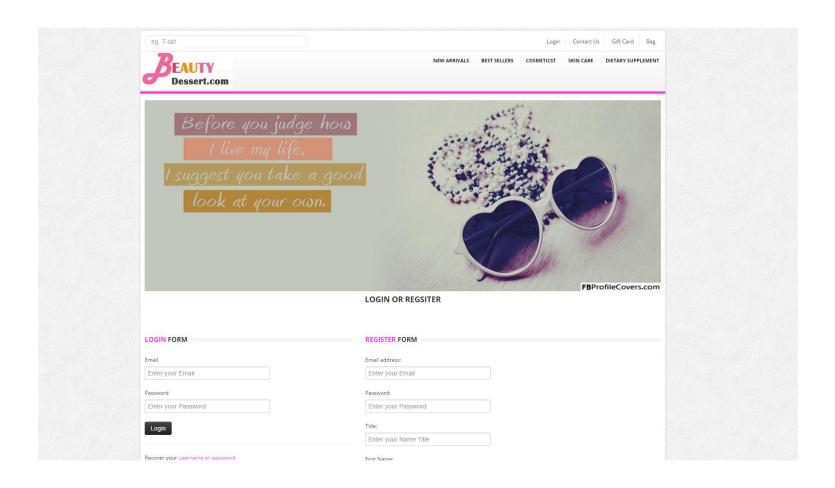

Case3: Customer input only Email and Customer input only Password

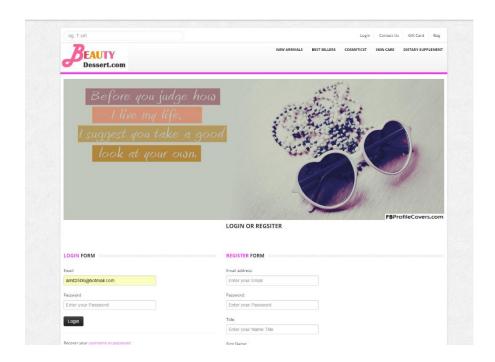

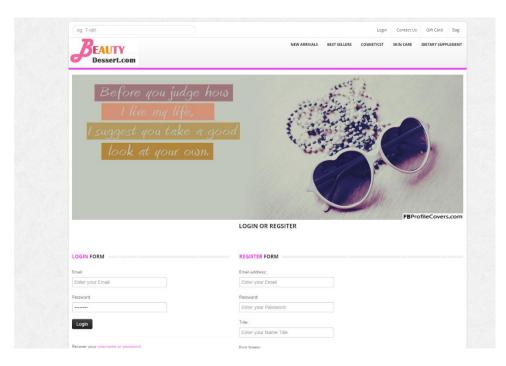

Un-Successful – Reload Login Page

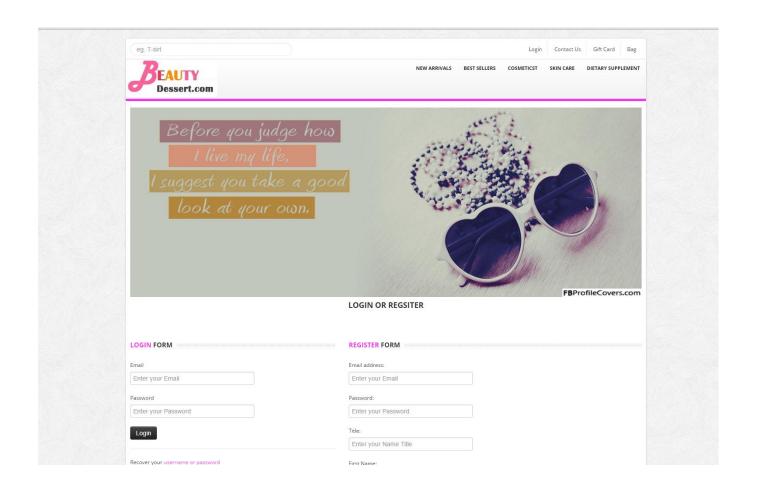

Case4: Admin input only Email and Admin input only Password

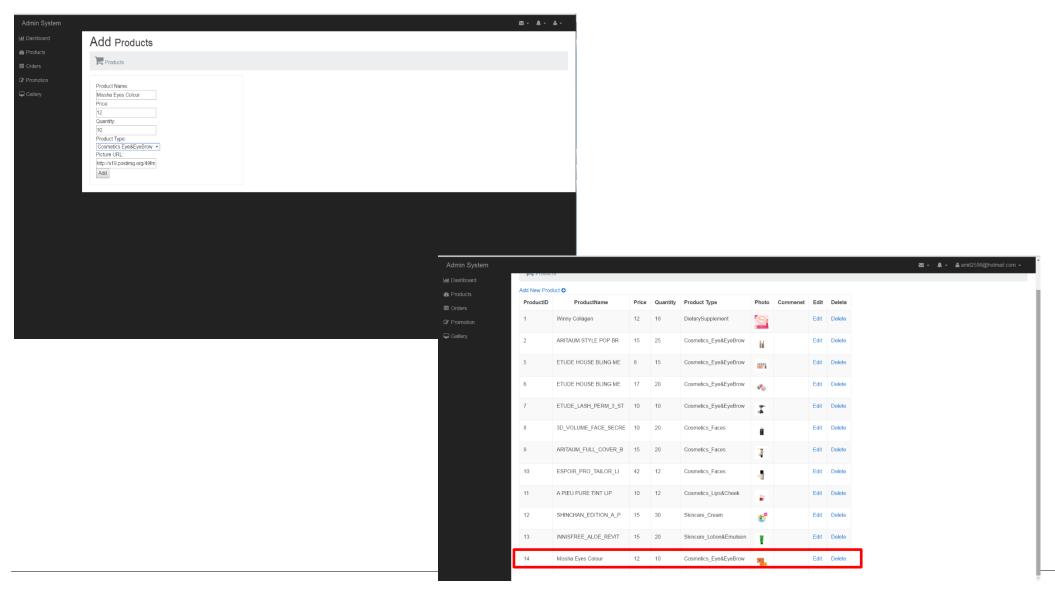

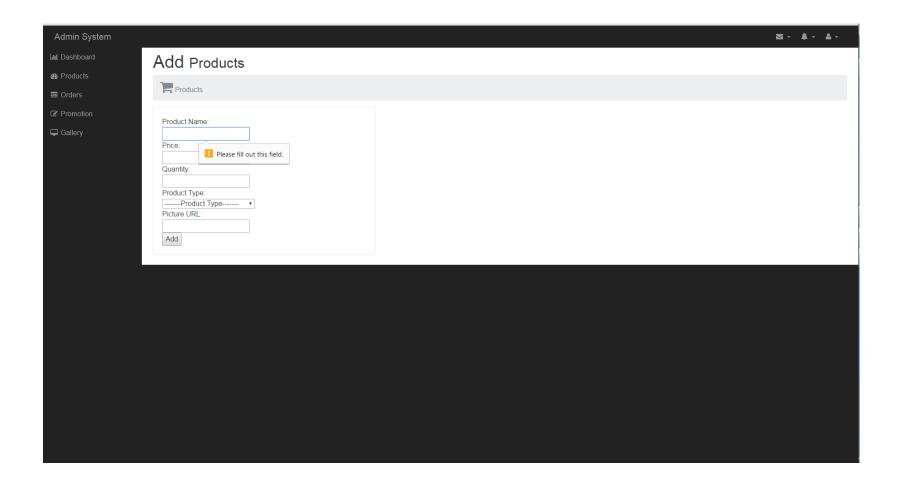

Un-successful – Reload Login Page

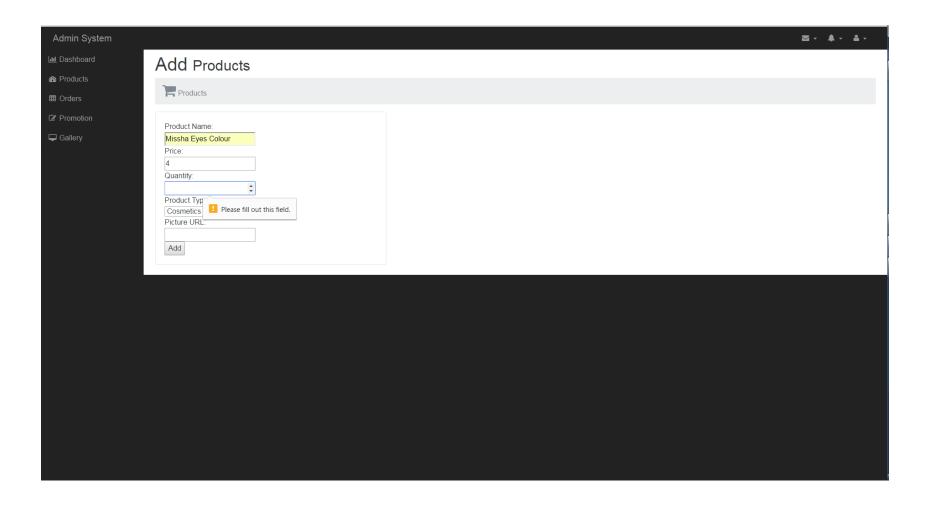

Case5: Add Product 'Missha Eye Colour' and then Show in Product View

Case6: Cannot Add product without filling information

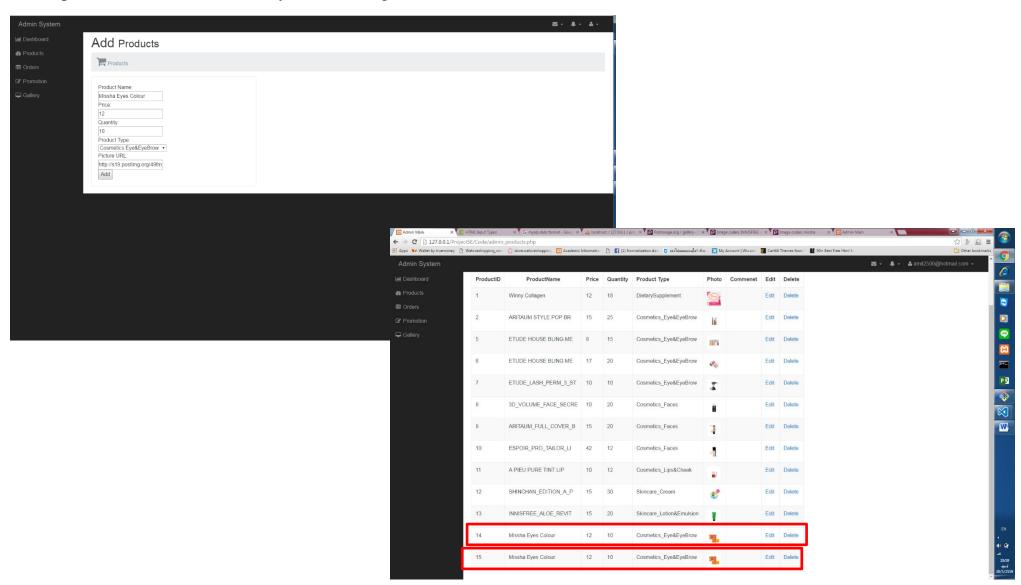

Case7: Doesn't Fill all Filed

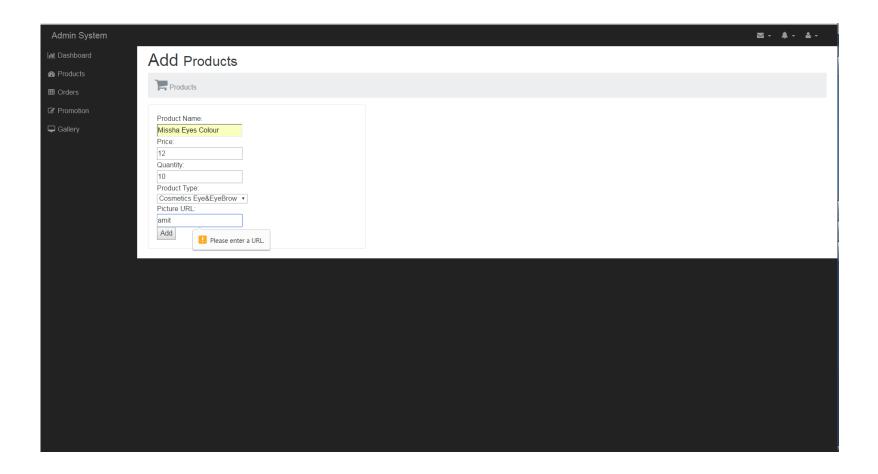

Case8: Add Product that the name already exists in database

In this pic - Add Product 'Missha Eyes Colour' Again

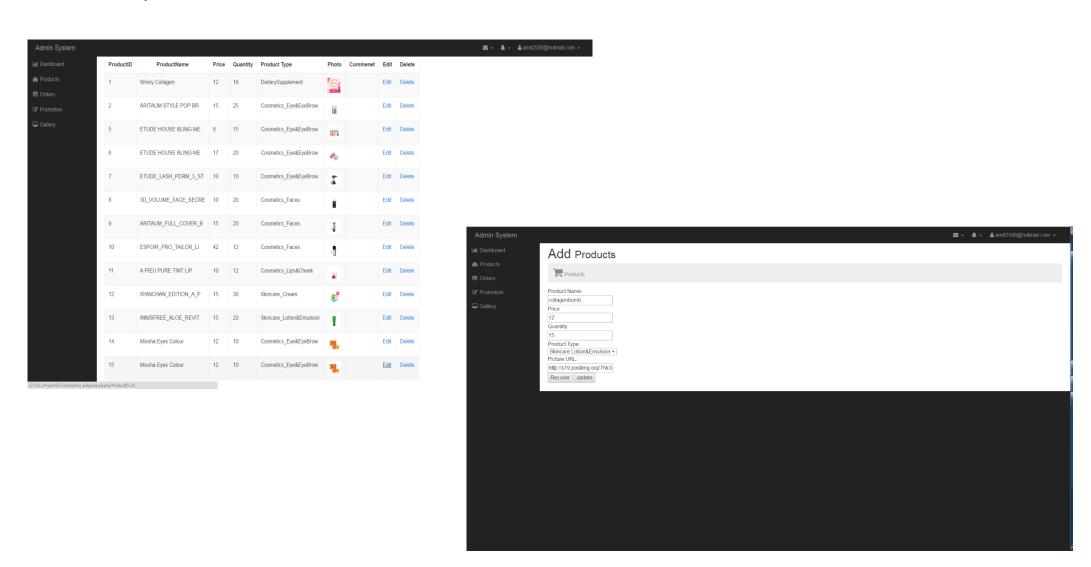

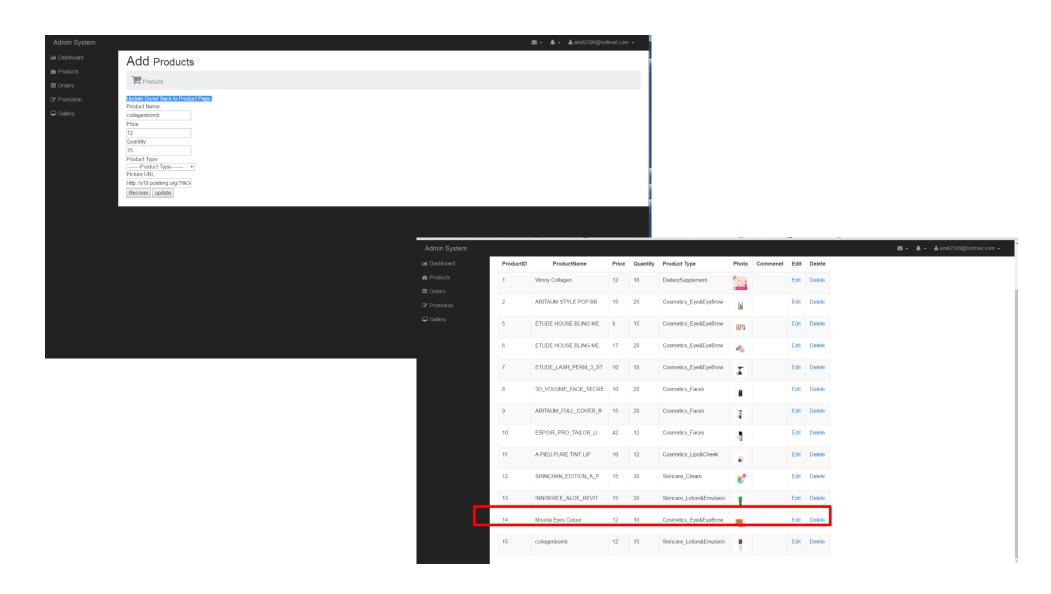

Case9: In Picture URL user much input in URL forms

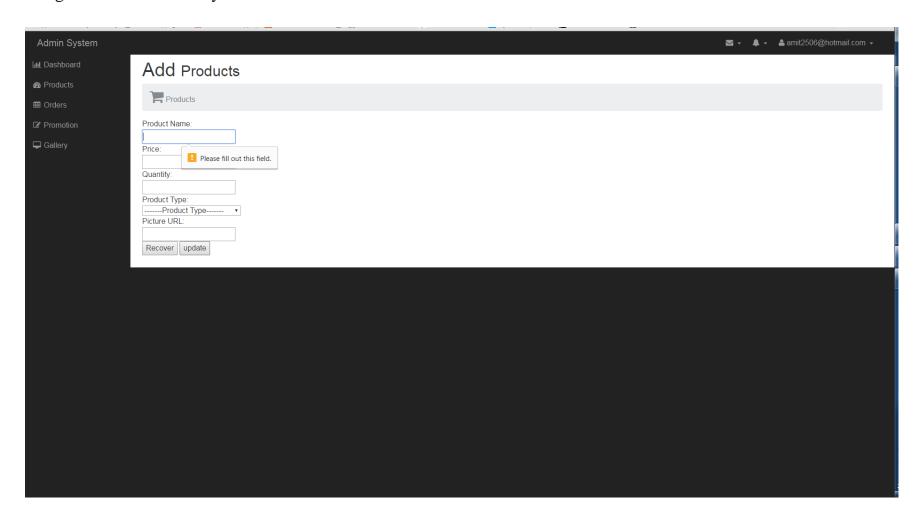

Case10: Edit Product

-Edit 'Missha Eyes Colour'

Case11: Editing Product without any data

Case12: Delete Product from inventory
